# INTRODUCTION

- Our project is making an employee management system.
- We can add, modify, delete, list the employees data.

# PROBLEM STATEMENT

Making a employee data  
management system where  
we can store his/her all  
details like Name, Number,  
etc

To make employee management  
hassle-free

**OBJECTIVE**

# MOTIVATION

- Today, in many of the companies, the employees data is stored in Microsoft Excel.
- It gets difficult to enter each and every data in exact columns and rows, which leaves room for errors in data entry.

# **BASIC ALGORITHM**

- **Standard Functions**
- **User defined function**
- **Structures**
- **File Handling**

# CONCLUSION

- We can easily take the details of employee and storing it in a .txt file.
- We can provide options to view, modify or delete the data entered.
- We can get the data listed.
- This project will make employee data management easy.
